3D widgets for vtk Status Report 02
Friday 20th October 2006

Comparing software

Study of 3DS Max and 3D-DOCTOR complete. I found that the medical domain has very little in the way of 3D applications and of those that I did find, it was not easy to get hold of working software.

Tests

Downloaded tests of existing widgets.

Started analysis of tests.

In order to create tests for widgets created in this project, I need to understand the purpose behind and implementation of test code for existing widgets.

Next steps

Study 3D construction software.

Look at Wiki hierarchy, as I think that the current version is not overly edit-friendly and needs a couple of changes so that information can be better found.

Look at 3D software suggested by Will.

Look at Slicer more closely to compare that with other software.
